

Clinical activities are at the core of every practice, so you'd expect electronic medical records to be the most important tool in a physician's medical kit. Even if the benefits were limited to just letting doctors work more efficiently and see more patients, without compromising the quality of care, the value of EMR would be unquestionable.

EDI Compatible Health Records (E-COHR) is a web-based application for recording and maintaining Patient Records electronically.

Hosted Model

E-COHR will be installed and maintained at our certified datacenters. You will not have any upfront investment for expensive network servers and ongoing expenses tied to equipment, personnel and operations. And the advantage of being able to focus solely on medical issues without any IT distractions is especially attractive.

This kind of solution allows you to trust MANO with all your operational support needs. Our data center operates with 99.5% availability, so you know service reliability rivals the best in the industry. Plus, the IT pros at the MANO will take care of maintaining servers, performing backups, installing upgrades and new software releases, and managing firewalls and security.

On Site Installation

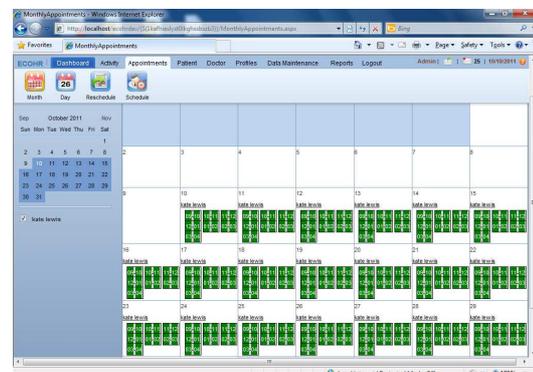

Some practices will find the right choice in an onsite installation. E-COHR can be installed on a server in the premises of the practice. You have complete control to manage your own operations and leverage current systems and on-site support staff for economies of scale.

Of course, if you need any support services for installation assistance, maintenance, or field engineering tasks, they're just a phone call away.

Initial Setup

A set of simple User Master Screens let you through the process of setting up the different kind of users and roles with the appropriate privileges settings.

Involvement from the practice is crucial for the successful implementation of E-COHR. The Data Maintenance screens help the practice to set up the system for ultimate user-friendly experience.

Technology

E-COHR was developed from the ground up based on the latest Microsoft technologies like Microsoft SQL Server, .NET and N-Tier architecture.

E-COHR although very simple to use provides interfaces to our different products like E-COMB, Dr.2u and other third party PM systems, clinical equipment and laboratories using industry standard HL7. E-COHR is connected to surescripts network to send EPrescriptions to thousands of pharmacies across the country. This interfacing capability makes E-COHR a robust and yet very simple system in one package.

Ease of Use

E-COHR has been developed based on long discussions with many health care providers. E-COHR hence has the flexibility to adapt to any kind of workflow that your practice may have.

We discovered that physicians can be highly effective if they were given a simple system to use. E-COHR thus, does not clutter different systems like Practice Management, Claims Management etc. together.

Summary of Features:

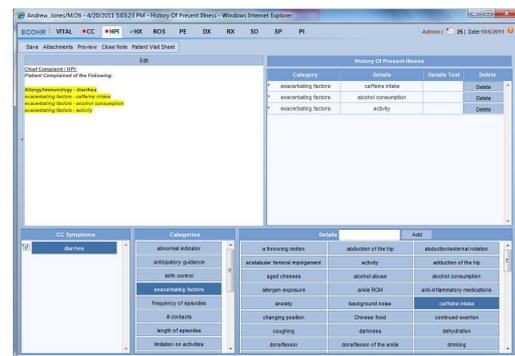

- Many advanced features not found at this price
- EHR that is easy to learn and use in days not weeks or months
- Real-Time support via phone and web, no waiting in a queue or call-backs!
- Web-based and so very efficient for rounds, nursing homes, multi-locations, etc.
- Reduce the time it takes to create structured clinical notes and narrative reports by 50%
- Completely personalized to your practice to ensure quick adoption and fast ROI
- Access to Certified Professional Coders for coding, documentation, and billing expertise
- Company has been in business over 12 years & financially secure
- Manages personal health information in a single chart, with proper HIPAA security & privacy safeguards. Avoids inadvertent PHI disclosures
- System always up to date and 100% HIPAA secure
- Unlimited training and technical support
- Web-based and so PC and MAC Compatible
- Data centers up and running 24/7 with full security and IT staff
- Automatic system backups and updates
- Software suite meets current criteria for Meaningful Use of EMR
- Low cost for start-up, no need to buy hardware & software
- Tailor made for the specific requirements of each practice
- Manages complex employer protocols and billing data
- Can be integrated with any PMS as a complete solution in end-end billing & electronic claims

Service

At MANO we understand that service is the most important thing for any EHR

implementation. We offer various levels of support to meet every client's unique needs, from the time they initially engage with MANO to later production phases and beyond.

We collaborate with our clients every day to find entrepreneurial ways to solve healthcare's great challenges. We are committed to our clients' success by providing a portfolio of world-class services to support our clients who have invested in our solutions.

Security:

Through systematic use of Industry-standard security procedures, the application makes sure that only authenticated persons have access to the system.

The Application allows adding New Roles and assigning Privileges to those Roles, and adding Users with a User ID and a Password to that Role. With the Privileges set up for a User through the Assigned Role, All authorized users are given access to respective screens.

Customization of E-COHR:

E-COHR is a web-based product that can be further customized to meet your healthcare needs, irrespective of the size of the organization or the type of data being accessed. Scalability and modularity enables E-COHR to grow with the organization and facilitate making necessary changes quickly. MANO will work closely with the key personnel at your organization to customize this product to your requirements.
